

Jira Printer

Thank you for downloading my program! I hope it will help you to make your life a little bit easier.

Preparation

At the time being there is no possibility to use Jira directly in the program. That is why you need to export your Jira Issues in a separate file.

1. Log in your Jira account.
2. Go to „Filters“ and choose or create a filter for your Jira Issues.
3. Apply the filter of your choice.
4. Go to „Export issues“ and choose „Export CSV (all fields)“.
5. Save the file where you can find it.

That is it! Now you are ready to use the program. If you have problems exporting your issues, there is a screenshot in appendix to help you.

Export

1. In Jira Printer program open your saved .csv file.
2. Then choose a name to use for saving with „Save as“ button.
You will then see, that your name of choice is not directly used. As the program will save two separate files for stories and epic respectively, your name of choice will have „_stories“ and „_epics“ suffixes.
3. Press „Export“ button.
4. When the file is saved the program will acknowledge it.

The rendered Jira cards can be found under the names from the step 2. Open them in Browser of your choice and print the page.

Now you only need to cut them and you are done! I wish you successful planning!

Improvements

If you have ideas or suggestions to improve the program, I will be happy to hear it!

Appendix

The screenshot shows the Jira web interface. At the top, a navigation bar includes links for 'Your work', 'Projects', 'Filters', 'Dashboards', 'Teams', 'Plans', 'Apps', and a 'Create' button. A red arrow labeled '1' points to the 'Filters' link. Below the navigation bar, the 'Issues' section is visible. On the left, there's a sidebar with 'AI' and 'order by created DESC'. The main area displays a list of issues with columns for 'Type', 'Key', and 'Summary'. On the right, there's a 'Share' dropdown and an 'Export issues' dropdown menu. A red arrow labeled '2' points to the 'Export issues' dropdown menu, which is open and shows options: 'Print list', 'Print details', 'Export XML', 'Export RSS', 'Export RSS (with comments)', 'Export Word', 'Export HTML report (all fields)', 'Export HTML report (my defaults)', 'Export CSV (all fields)', 'Export CSV (my defaults)', 'Export Excel CSV (all fields)', 'Export Excel CSV (my defaults)', 'Export XLSX (form data)', and 'Create dashboard gadget'. At the bottom right, there's a pagination bar showing '1-50 of 1000+' and a list of page numbers (1, 2, 3, 4, 5, ..., 20).

In the Jira software you can find Filters where the arrow 1 is pointing. After choosing and applying the filter, go to „Export issues“ and choose the options arrow 2 is pointing to. Save the file.
